

# High Speed Shredding

Doppstadt AK510 / AK435 / AK430

The Doppstadt AK range of high-speed shredders is designed using German engineering, ensuring quality machinery. Their aggressive 2.5t rotor, rotating at 1000rpm produces an accurate and consistent shred size down to 35mm, if required.

To ensure maximum performance and reliability, high-speed shredders can be supplied with a skilled operator and an on-site maintenance package. In order to tackle more difficult waste streams, these machines can be used in combination with our slow-speed shredders.

## Key Features

- Shredding of wide range of waste to produce saleable products.
- High throughput
- Can shred down to 35mm.
- Resistant to light contamination.
- End roller magnet.
- Can be supplied with an operator.
- Fire suppression fitted.

## Applications

- Green & Organic Waste
- Biomass
- Wood

When used in tandem with our slow speed shredders:

- Industrial & Commercial Waste
- Construction & Demolition Waste
- Mattresses
- Tyres
